NEW

NEW OPTIONS FOR YOUR WIRELESS WEATHER STATION!

For years, our integrated WatchDog Wireless Weather Stations have provided the ability to measure essential crop data needed to make informed decisions regarding irrigation, frost, insect and disease control and nutrient management.

WatchDog®

As we continue to innovate, our newest models come equipped with even more available sensor ports. Offering **EIGHT** general, plus one sensor port dedicated to wind speed and direction, your measurement options have expanded.

HOW DO I KNOW WHICH MODEL FITS MY NEEDS?

First, decide what measurements are important to you, then choose the model most closely tailored to your needs. Finally, purchase any additional sensors to collect all the information you need. To help guide your decision, see the chart below to clarify what each model offers.

More data provides better decision making and better return on your investment. Respond quickly and reduce crop damage with frost/temperature alerts direct to your phone when you add the frost alert package in SpecConnect. Use real-time data to respond to changing weather conditions and make timely, smart decisions.

Use our free WatchDog Mobile app to get your new weather station up and running quickly. Alternatively, configure your station from your PC using SpecConnect.

Cellular or wifi subscriptions allow data from your weather station to be sent to the SpecConnect cloud. Use your PC or the free WatchDog Mobile app to view current conditions on your phone. With the SpecConnect cloud, you can easily view reports for degree days, chill hours, disease and insect pressure, monthly weather reports, soil moisture trends and more. Use our custom reports feature to gather the data that is meaningful to you.

SPRAYER STATION

WatchDog®

AVOID DRIFT COMPLAINTS

Don't let misapplication of herbicides cost you. Let our sprayer station with ultrasonic anemometer help you put pesticides where they belong and nowhere else.

Pesticide drift is increasingly important to commercial applicators. Accurate data helps pesticide applicators make important decisions regarding weather conditions that affect safety, drift and proper application. With the WatchDog Sprayer Station you can provide evidence of suitable conditions for pesticide application by logging your data. Mount the station directly on your equipment to monitor and log weather conditions on-the-go.

All-in-One Weather Station Measures:

- Wind Speed/Direction & Chill
- Air Temperature
- Barometric Pressure
- Humidity
- Dew Point
- Computes True Wind Speed

Additional Information

- Continuously log your weather parameters at a user-selectable rate or hit the snapshot button to capture current conditions at a specific moment
- Station uses an internal compass and GPS to adjust the wind sensor values by subtracting the vehicle speed and direction to compute the true values
- Handles adverse conditions with a UV-stabilized, compact housing that is fully waterproof and resistant to chemicals

FULL SPECTRUM PAR LIGHT

Consistent Plant Quality Starts With Light Why Measure Light?

Improve growth and quality of your plants. Shade cloths and hanging baskets reduce plant light more than you know!

Position sensors throughout your greenhouse to compare light levels and the effect those changes have on plant quality. You can also use multiple sensors simultaneously to compare light levels and the impact on turf health, quality and aesthetics.

Full Spectrum Quantum PAR Light Sensor

The full spectrum sensor can accurately measure light intensity across the full PAR spectrum – including from LED lights

- Integrates multiple optical detector elements to accurately measure light across the entire PAR spectrum, from all light sources - including narrowband LED
- Perfect for all artificial light installations, as well as locations supplementing natural light with LEDs
- Use with the WatchDog 2000 and 3000 Series Weather Stations, Pups, and the External Light Sensor Meter (Page 26)

3668A LightScout Full Spectrum Quantum (PAR) Light Sensor

Quantum PAR/DLI Light Meter

Grow healthier, greener plants by measuring their precise light intake

Provides accurate PAR light readings from ANY light source

- Full sun to full shade indoors or outdoors
- Artificial light sources (LED, High Pressure Sodium, Metal Halide, Fluorescent, Halogen, etc)

Three modes of operation:

- Instant spot measurement mode for PAR light readings
- Scan mode for quickly averaging PAR over an area
- DLI mode shows Daily Light Integral on the LCD (no computer needed)

Integral mounting plate for stand, stake, lanyard hanger hole and magnet mounts

1/4" - 20" threaded hole for mounting on camera tripods and stands

Includes sensor cover and soft-sided case

Very Low	2 to 5	100 to 200	Poor Quality
Low	5 to 10	200 to 400	Minimum Acceptable
Medium	10 to 20	400 to 800	Good Quality

LIGHT METERS

DLI 100 Light Meter

Light is one of the most important factors in plant and turf quality. The best way to quantify light for growing plants is to measure photosynthetically active radiation (PAR) light between 400 and 700 nm - the range that promotes photosynthesis. The daily light integral (DLI) measures the total amount of PAR within a 24-hour period.

For best results, place one meter in the sun, one in partial shade and one in full shade

- Affordable & simple, one button operation
- Meter runs for 24 hours to calculate DLI
- Real-time intensity levels are shown in $\mu\text{mol}\cdot\text{m}^{-2}\cdot\text{s}^{-1}$ every 4 seconds daily
- Battery included
- Greenhouse and Turf models available

Quantum/PAR Meters

Measure the light used for plant growth - PAR is a more valuable measurement than foot-candles, as it measures only the light used by plants for photosynthesis.

- Measures photosynthetically active radiation (PAR) from 400 to 700 nm; Range of 0 to 2,000 $\mu\text{mol}\cdot\text{m}^{-2}\cdot\text{s}^{-1}$
- Available in a variety of configurations for your convenience

SOIL MOISTURE PROFILER

COMING SOON! **WATERSCOUT** Profiler

The WaterScout Profiler will be released in the first half of 2023
Please check our website for updates or email marketing@specmeters.com to be added to our pre-launch communication if you have an immediate interest in this product.

Imagine one probe with ALL the sensors you need already integrated!

Our Profiler will offer a variety of probe length and each length includes a designated number of sensors. Each sensor measures both temperature and soil moisture. No need to purchase any additional sensors if those are the only measurements you are interested in capturing. The Profiler connects directly to one of our NEW 3500 Model Weather Stations, so all your information is available through the WatchDog App or can be viewed via SpecConnect.
